

# Modern Data Science Technologies in Healthcare

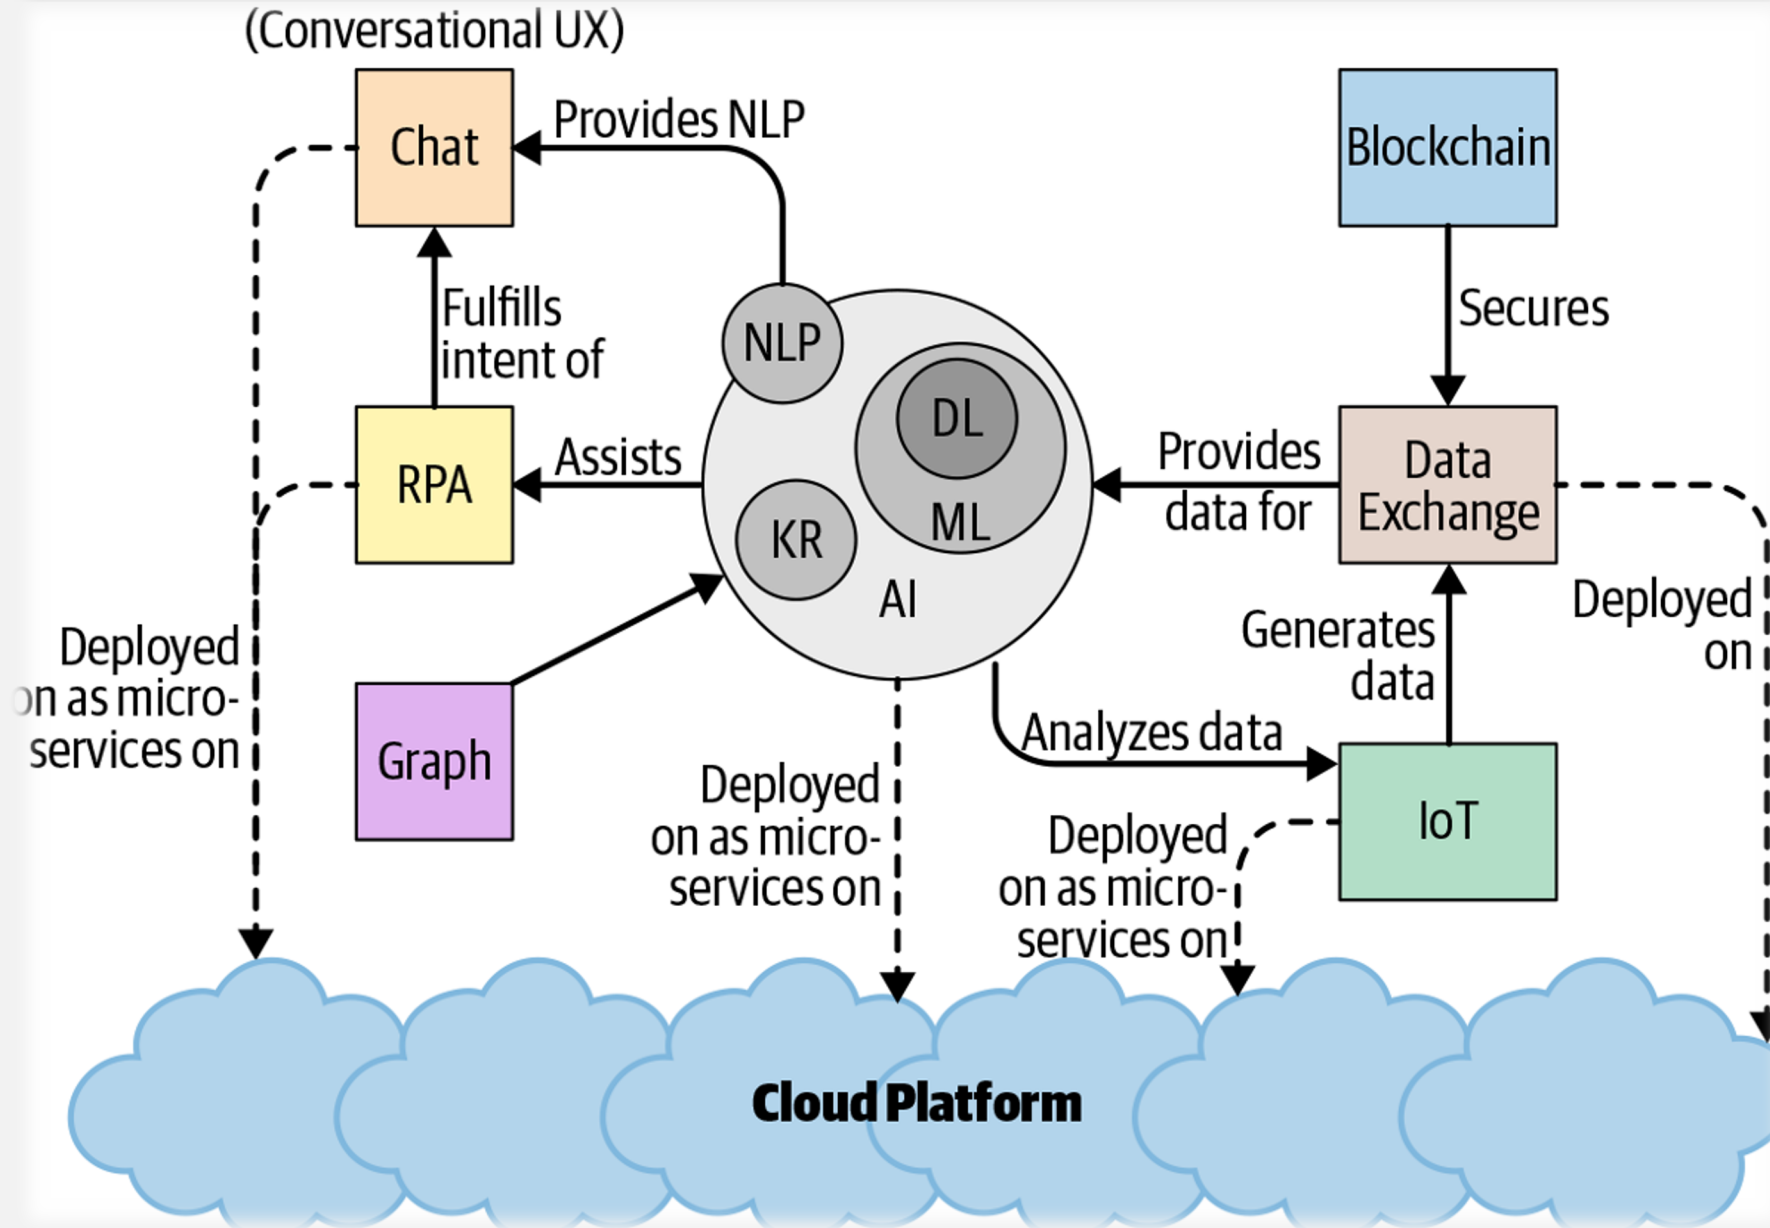

Prof. Dr. Alexander Schönhuth  
M.Sc. Maren Knop  
Genome Data Science

# Introduction

## Healthcare sector:

- Complex ecosystem
- Fragmented healthcare data stored in diverse sources and formats
- Complex healthcare and privacy regulations
- New technologies intruder on caregiving
- Reluctance of clinicians and providers to trust new technologies

# Organizational Matters

- Groups of two people
- Presentation of one key technology
- Present a paper
  - <https://pubmed.ncbi.nlm.nih.gov>
  - <https://www.biorxiv.org>
  - ...
- Choose a date until Dec. for your presentation (latest: Feb. 4, 2022)
- Upload slides until Feb. 25, 2022

## Presentations:

- 40 minutes + discussion
- **Explain technology**
- Example of technology in Healthcare (Use Case)
- Drawbacks and future perspectives

# Technologies

- Genomics

- Blockchain

- Graph  
Databases

- Graph Neural  
Networks

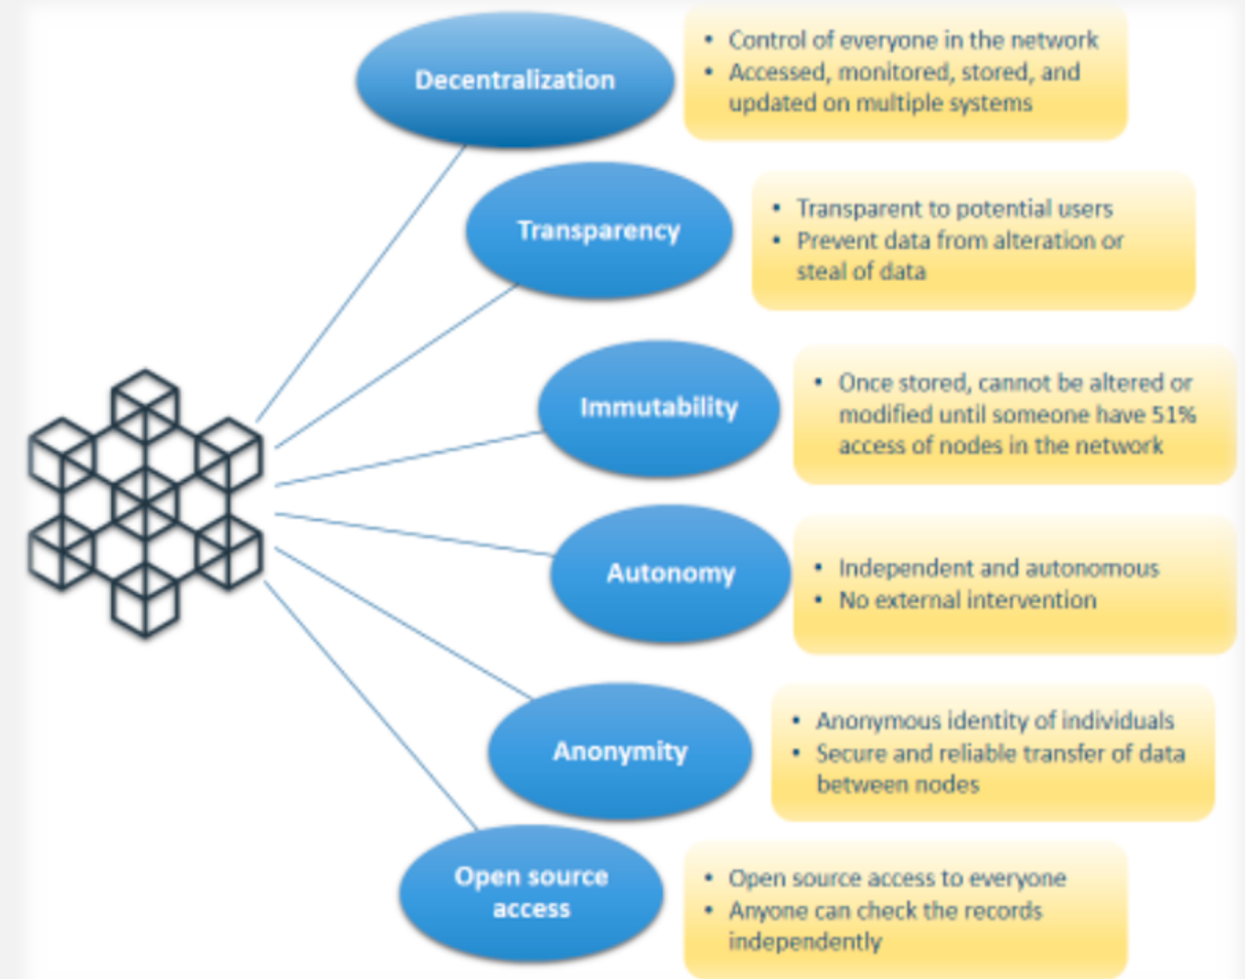

# Genomics

- First sequenced human genome:
  - \$3 billion
  - 13 years
- Today:
  - costs in range of \$1,000
  - Hours
- Precision and personalized medicine
- Comprehensive view of patients
- Predict disease, monitor health

# Blockchain

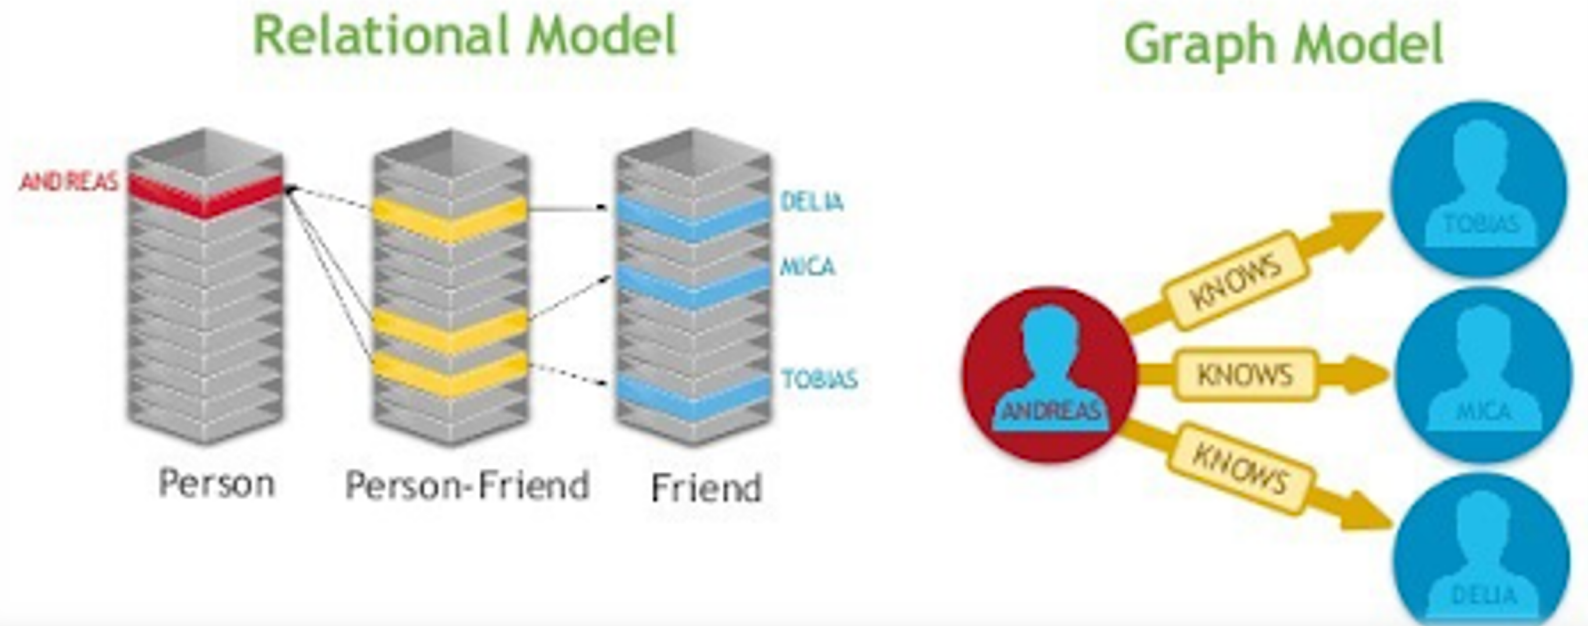

- Dedicated to the exchange of a new virtual currency called Bitcoin
- Ledger on which transactions are chronologically recorded in a cooperative and tamper resistant manner
- Rising complexity of data
- Clean, safe and secure data sharing

# Graph Databases

- Healthcare data is complex:
  - many relationships
  - high variability
- Rapid flexible changes to the organization of the data

## Relational Versus Graph Models

# Artificial Intelligence

## GROWTH IN HEALTHCARE DATA

# Graph Neural Networks

# Paper

- **Blockchain**

- Realizing the potential of blockchain technologies in genomics (2018)
- Blockchain distributed ledger technologies for biomedical and health care applications (2017)

- **Graph Databases**

- Use of Graph Database for the Integration of Heterogeneous Biological Data (2017)
- Learning a Health Knowledge Graph from Electronic Medical Records (2017)

- **Graph Neural Networks**

- Drug-disease Graph: Predicting Adverse Drug Reaction Signals via Graph Neural Network with Clinical Data (2020)
- Heterogeneous Similarity Graph Neural Network on Electronic Health Records (2021)
